

1. You need to take
8 papers of same size (ex : 10cmx10cm).
2. Focus on one piece first and we will follow the same steps on all remaining 7 papers.
3. We have to start folding a piece of 10 x 10 into half diagonally.
4. To do that just bring one corner to the other.
5. Rotate into this position and
6. Fold the paper into half
7. Now on the first layer, just bring the diagonal edge to the vertical
8. After making the mark, we can fully unfold.
9. Now we have to close the corner using the two diagonals we just made.
10. Let's close the corner like this .
11. Now make top side straight by aligning with left side.
12. Let's go to other side and repeat same thing
13. Rotate in this position.
14. Fold top diagonal to middle
15. Do it same on left .
16. Close like before.
17. Go through 3 to 16 for remaining 7 pieces of 10 x 10
18. Last steps are to put altogether into a star.
19. First take two pieces, open the larger part of the first one and fit the smaller end of the second one under the middle layers of first.
20. Push the second one inside without crushing.
21. Follow the same logic to add on remaining pieces.
